STRATEGY CONSULTING | BLOCKCHAIN & SMART CONTRACTS | DATA ANALYTICS

(Project Coordinator)

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 732907

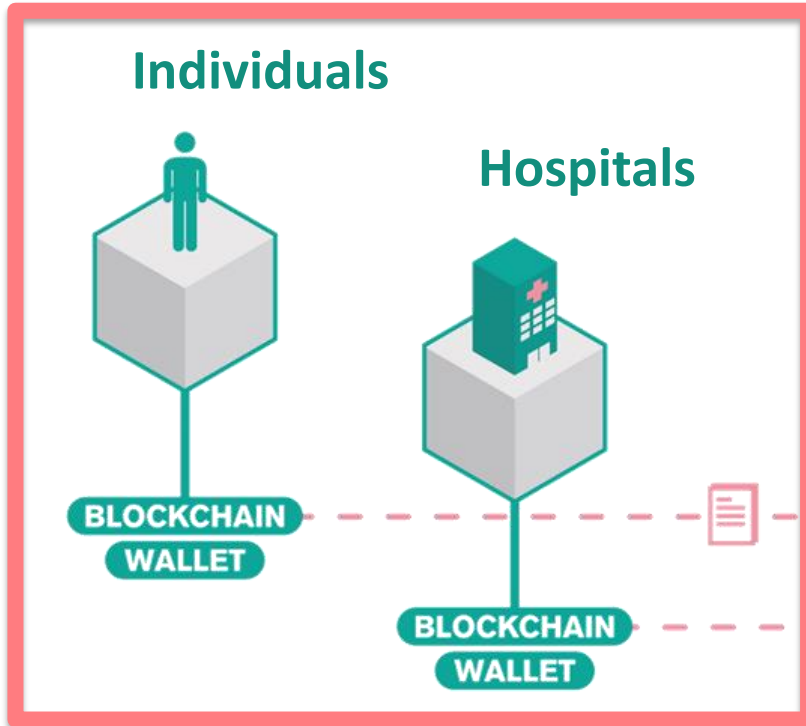

# “MY HEALTH, MY DATA”

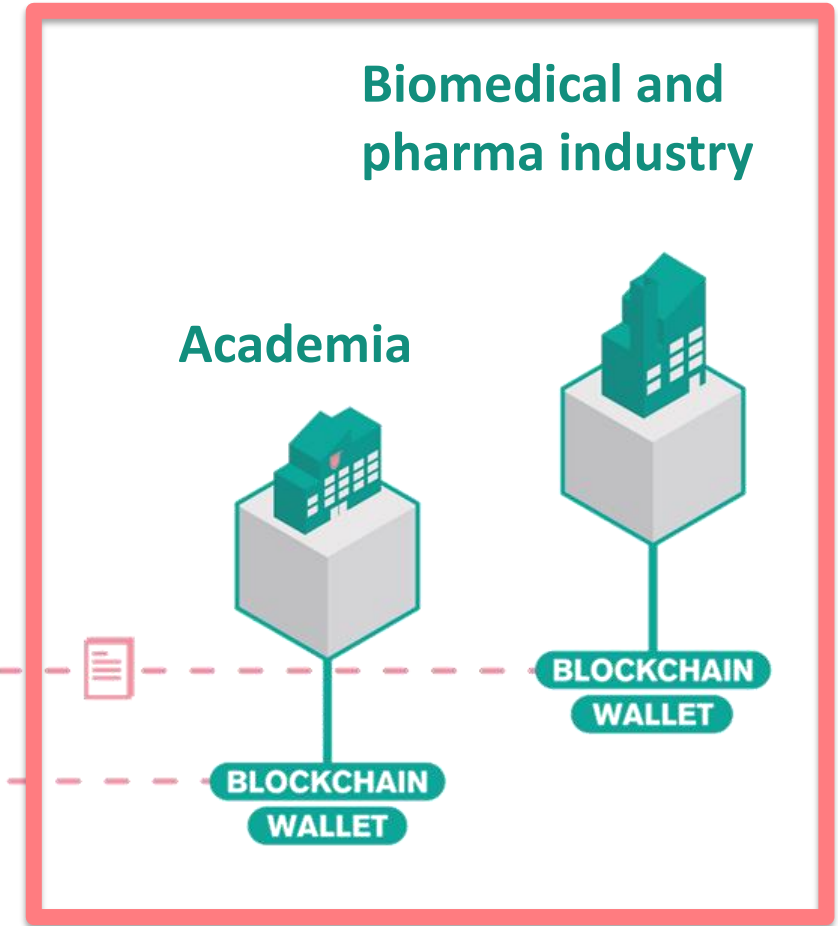

**MyHealthMyData (MHMD)** is a Horizon 2020 Research and Innovation Action (*ICT-18-2016 - Big data PPP: privacy-preserving big data technologies*) developing a **blockchain-based platform for sharing and exchanging PERSONAL HEALTH DATA** for medical care, research and development.

# MHMD stakeholders

## Data providers

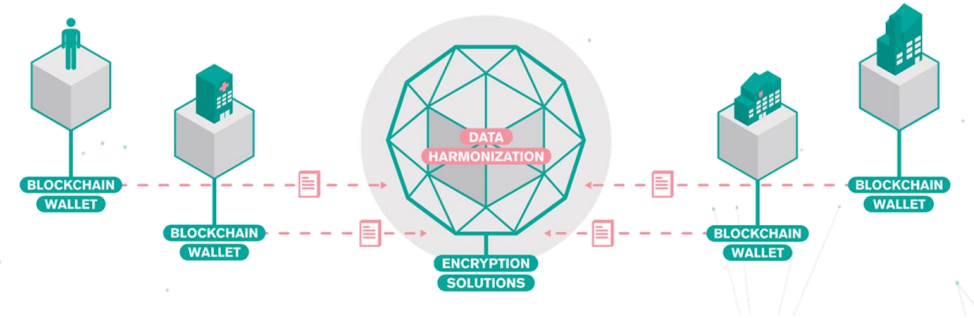

## Data users

# MHMD at a glance

- **Duration** November 1, 2016 – October 31, 2019
- **Funding** € 3.456.190
- **Consortium**

5 SMEs

LYNKEUS

gnúbila

4 Clinical partners

4 Research centres and Academia

1 Legal consultancy

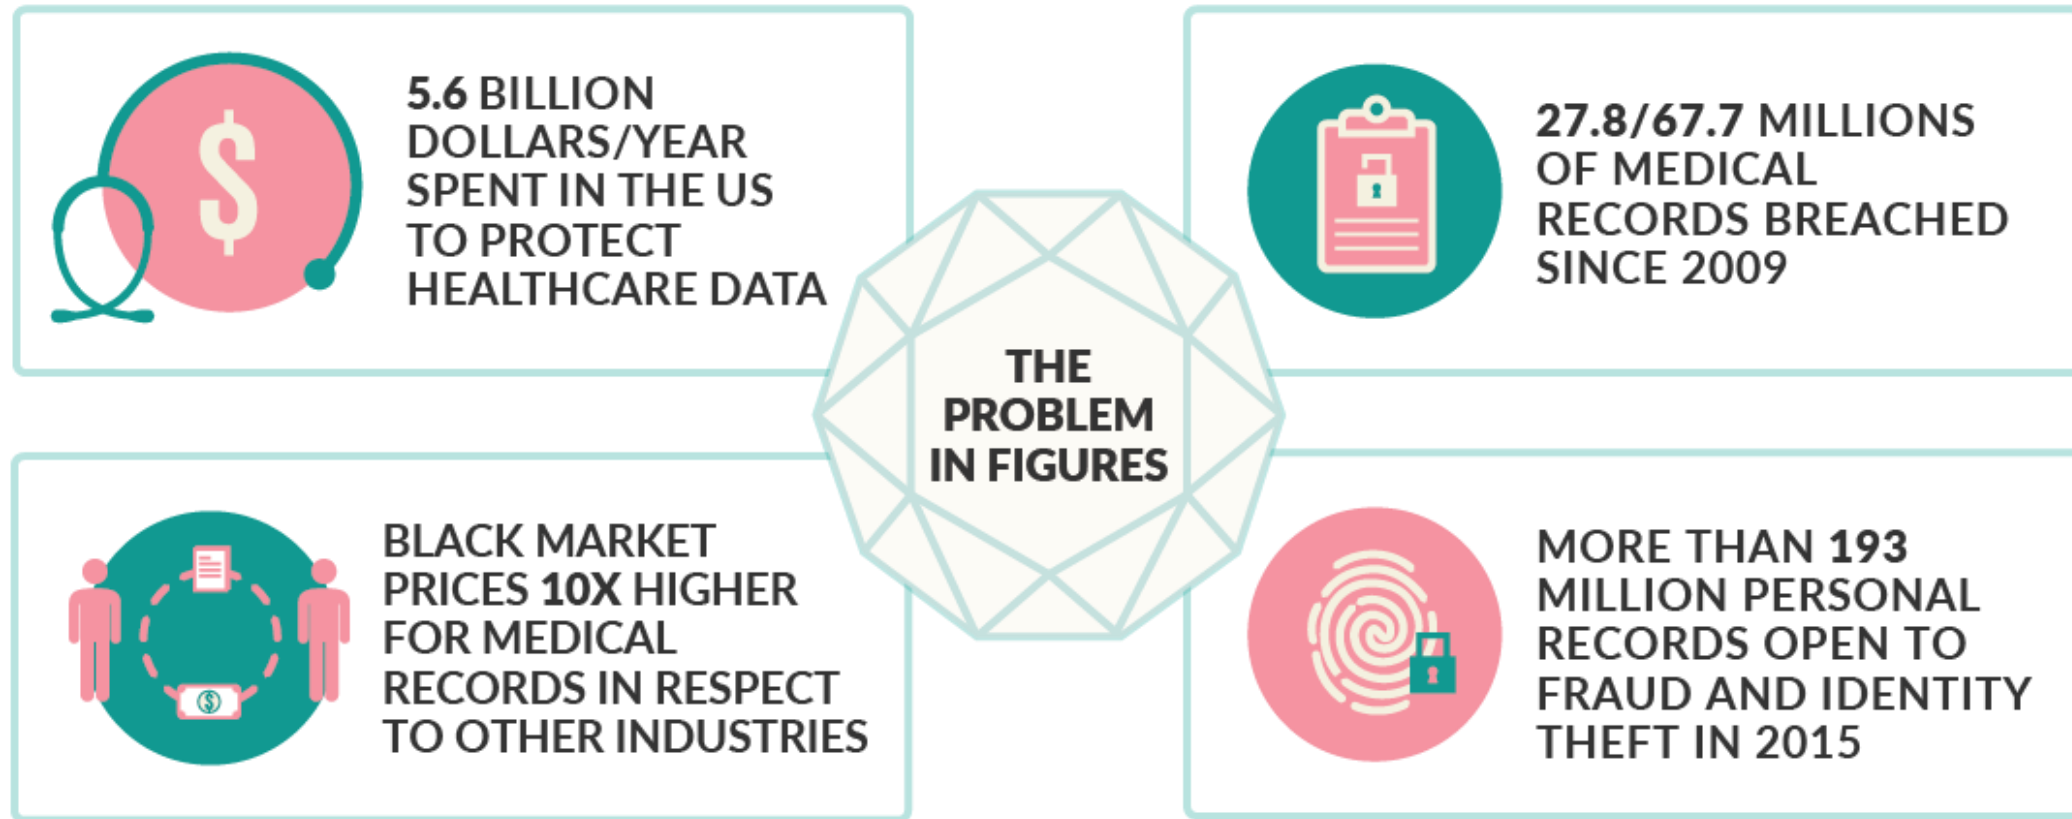

1 Industry

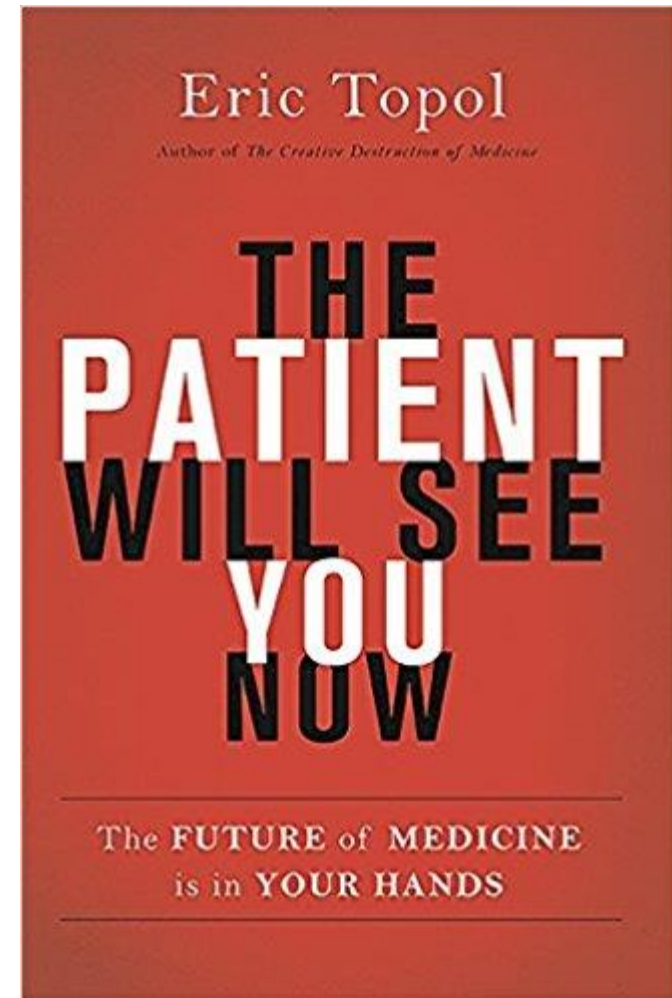

# ***WHY MHMD?***

# Medical data are more threatened than ever....

...while patients and citizens are not taking part in the health process

Currently, patient is “*the single most unused person in health care*”.

# Public initiatives are calling for individuals and patient engagement...

**Patient Power**

**Patient  
Empowerment  
Foundation**

## ENTERS THE GDPR: new rights, new opportunities

- **Data access:** *“A data subject should have the right of access to personal data which have been collected concerning him or her”*
- **Data portability:** receive personal data in a *“structured, commonly used, machine-readable and interoperable format”*
- **Patient consent:**
  - **Freely given, informed, and specific**
  - **Easily readable, and in plain language**
  - Data Controller will have to **demonstrate consent**

# MHMD mission

## (1) DATA PRIVACY AND SECURITY

*Securing and de-identifying sensible data making use of state-of-the-art data security and privacy-preserving technologies*

## (2) DATA VALUE ENHANCEMENT

*Leverage the value of biomedical datasets for medical care, research and business*

## (3) CITIZENS' EMPOWERMENT

*Grant individuals ownership and control of their personal health data*

# *How will MHMD do that?*

*"Gears" (CC BY-SA 2.0) by AJC1*

*"Gears" (CC BY-ND 2.0) by Charlie Gross Photography*

# Using blockchain and smart contracts

## BLOCKCHAIN

---

The data platform will rely on the blockchain system, a digital ledger where data is trimmed in hash-based language code and data transactions are visible to the entire network of stakeholders, minimizing any possibility of fraudulent usage.

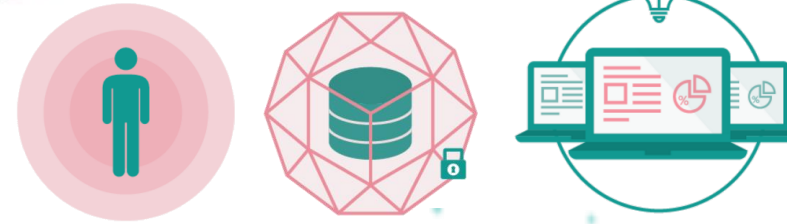

## SMART CONTRACTS

---

Self-executing contractual states, based on the formalisation of contractual relations in digital form, will automate the execution of peer-to-peer transactions under user-defined conditions.

# (1) BLOCKCHAIN

A secure, non-editable digital ledger where:

- **All transactions are confirmed by the network** as entries forming *blocks of transactions*
- **The whole network monitors the legitimacy of each transaction,** guaranteeing *a distributed control system*

Applying the blockchain approach to health data will guarantee a **distributed control over lawfulness and legitimacy of data transactions**

**gnúbila**

# A consortium blockchain

Based on **Hyperledger Fabric**

- Lightweight (not computationally and energy hungry)
- High transactions throughput (1500 transactions per second)
- Open source but production quality
- Modular and flexible: can be adapted according to the data governance model
- Simple to use and performant
- **Private and permissioned:** collectively defined membership and access rights within the consortium members
  - ↳ No *consensus mechanism* required (computationally demanding): all consortium members are already trusted parties

## (2) SMART CONTRACTS

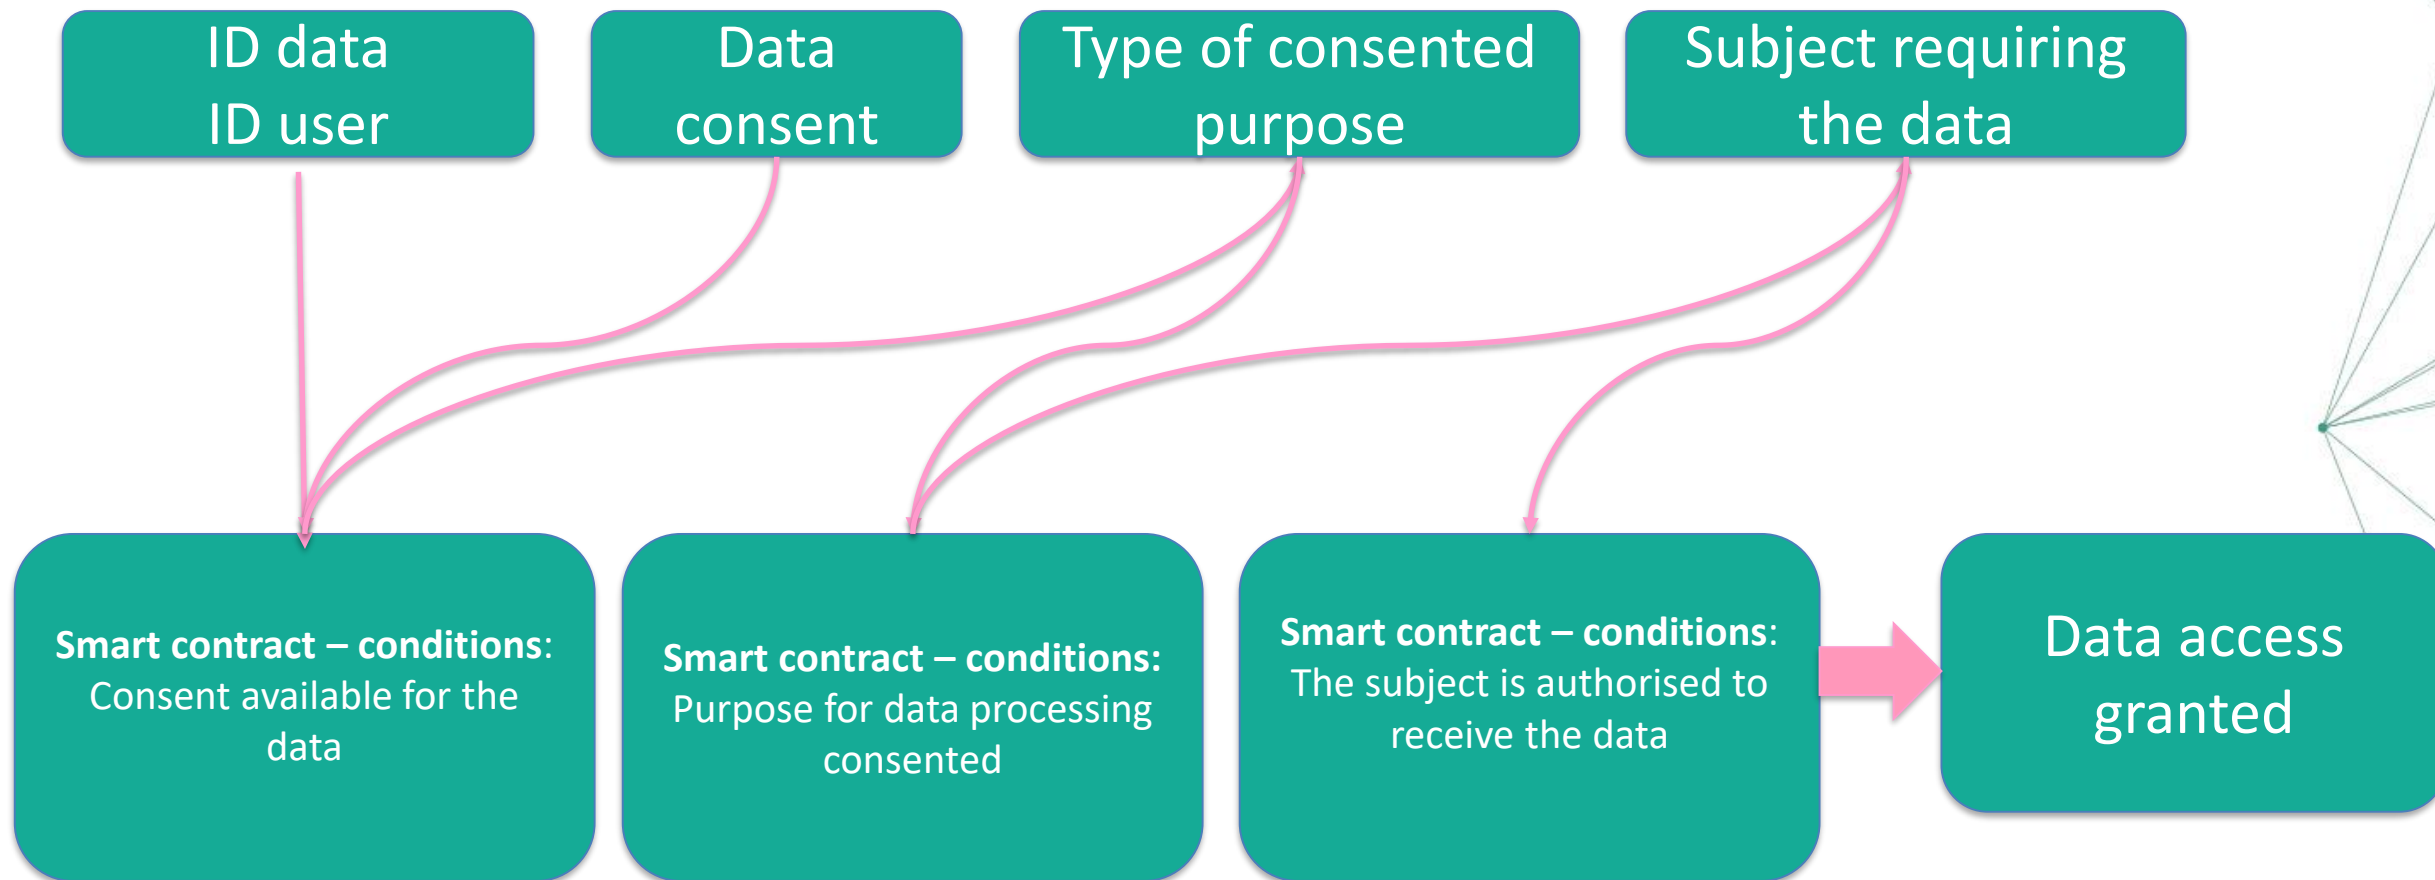

**Self-executing contractual states**, based on the formalisation of contractual relations in digital form, **that automate the execution of peer-to-peer transactions** under user-defined conditions.

*Regulate data transactions on the blockchain, allowing to set use conditions and consent options for different stakeholders and purposes.*

# Regulating data access and enforcing consent through a smart contract

# MHMD key innovations for patients

## PERSONAL DATA ACCOUNTS

---

Personal storage clouds will enable individuals to access their data from any technological device through the blockchain and employ them for personal use.

## DYNAMIC CONSENT

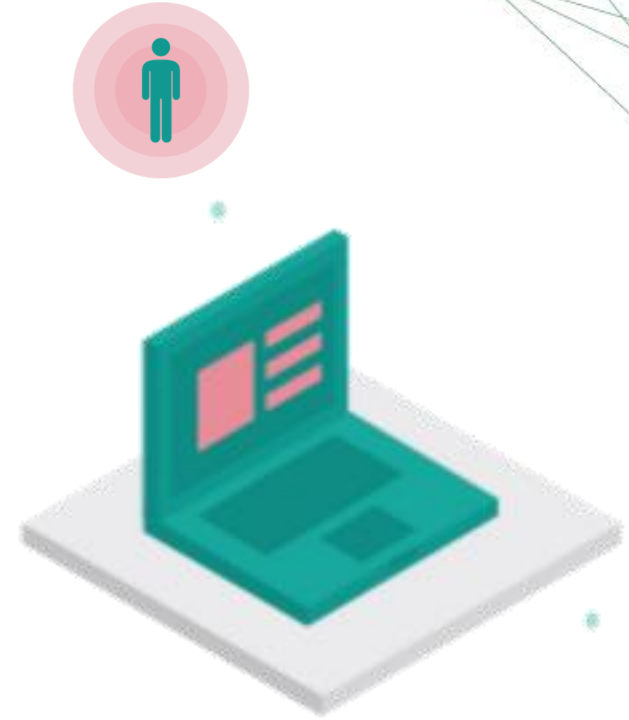

---

A dynamic consent interface will allow users to grant, deny or revoke consent to data access for different uses according to their preferences.

# (3) PERSONAL DATA ACCOUNTS

Individual data ownership and control

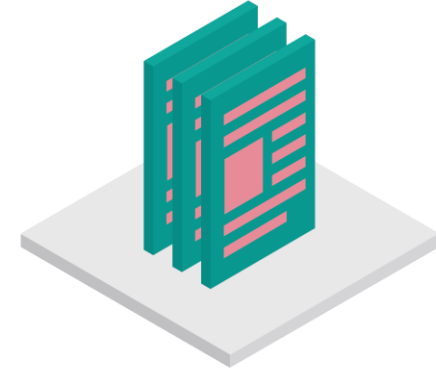

**Personal storage clouds** enabling individuals to **access their data** from any technological device through the blockchain and **employ them for personal use.**

***Aggregate personal data from disparate sources***

*(social media accounts, clinical data repositories, personal drives, wearable devices, etc.), in a single, user-owned account*

# (4) DYNAMIC CONSENT

Dynamic Consent allows to extend traditional consents into a **user workflow in which patients may or may not allow access to their data based on a range of key parameters:**

- *What will data be **used for***
- ***What** data will be **retained***
- *What data will be **shared with 3rd parties** and for **what purpose***
- *How will the **right to be forgotten** be implemented*
- *Define **post-mortem usage or donation** of personal data.*

# MHMD key innovations for security, privacy, and data usage

## MULTILEVEL DE-IDENTIFICATION AND ENCRYPTION TECHNOLOGIES

Multi-party secure computation and homomorphic encryption techniques will be employed for encoding and de-associating sensible data from the owners' identity, still allowing the application of advanced analytics on pseudonymised or anonymised data.

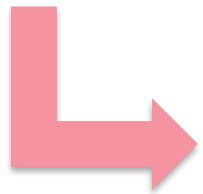

## BIG DATA ANALYTICS

The project will explore the feasibility of applications leveraging the value of large clinical datasets, particularly advanced data analytics, medical annotation retrieval engines and patient-specific models for physiological prediction.

# (5) MULTILEVEL DE-IDENTIFICATION AND ENCRYPTION TECHNOLOGIES

- Multi-party secure computation
- Homomorphic encryption

- *Encode and de-associate sensible data from the owners' identity, still allowing the application of advanced analytics*
- *Allow computation on encrypted data*

# (6) PENETRATION AND RE-IDENTIFICATION CHALLENGE

Checking the ability of avoiding privacy & security breaches

"Hacked..." (CC BY-NC-ND 2.0) by Christine Krizsa

- **Penetration testing and vulnerability assessment**  
on the project federated **Infostructure**
- **Active self-hacking and public hacking simulations**
- **Testing external re-identification possibilities** on
  - 1) *synthetic datasets attributed to virtual patients*
  - 2) *patients consenting to being used as test-basis*

# Synthetic datasets: *machine learning to enable machine learning*

- Fully artificial data automatically generated by recursive conditional parameter aggregation with global statistical models through machine learning algorithms.
- According to MIT Institute for Data, Systems and Society : ***“artificial data give the same results as real data, without compromising privacy”***

In MHMD, **synthetic cardiology data sets** have been obtained at *Barts’ Hospital (QMUL)* based on **aggregate statistics of a population of 100,000 patients**. The datasets contain fake names, addresses, DOB, DOD, episode visits, anthropometry (e.g. weights, heights, BMI, BSA, etc.) and cardiac function parameters, etc.

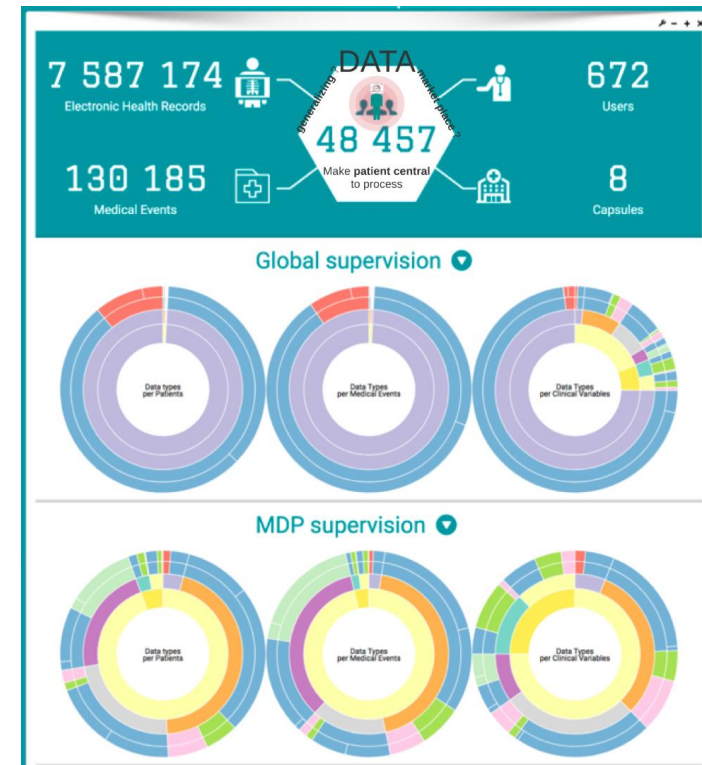

Synthetic data have been preliminary used for *data mapping, profiling and testing privacy-preserving algorithms*.

# (7) DATA CATALOGUE

## Glancing at the data...

The **MHMD DATA CATALOGUE** will allow potential data users:

- To have a **preliminary look** at the type of **datasets available** on the platform
- Perform some **high-level descriptive statistics** on the data through the use of *multi-part computation*

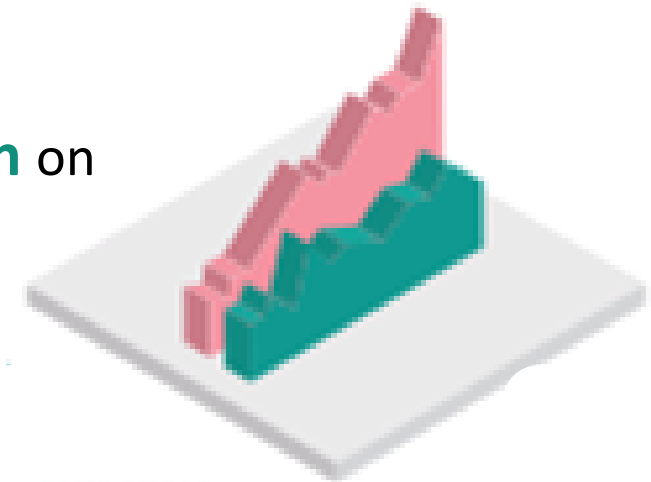

# (8) BIG DATA ANALYTICS

Leveraging the value of large biomedical datasets

The project will explore the feasibility of

1. **advanced data analytics**
2. **medical annotation retrieval engines**
3. **patient-specific models for physiological prediction on**  
*de-identified and encrypted data*
